Clinical Visioning Session

Cerner PowerChart Oncology Demo Link

## Defining the CST Clinical Vision

Last Thursday morning the CST Project Management team held a long-awaited session to develop a clinical vision that will guide the work in the Design, Build, and Integrate (DBI) phase of the project.

The CST clinical vision will:

- Communicate the purpose of the project.
- Ensure the messaging about the project is consistent.
- Help engage stakeholders and build commitment for the project.
- Summarize the project's value to VCH, PHC, and PHSA.

A cross section of over 70 clinical and non-clinical representatives from each of the three health organizations as well as folks from IMITS (Information Management / Information Technology Services) were invited to participate. We also had a stellar patient representative!

The energy of the participants was amazing! While there may have been three organizations represented, the messages were resoundingly "one" in the development of themes for the clinical vision. We even had an artist on hand to capture these themes in a visual way.

The session was opened by David Byres, Vice President, Acute Clinical Programs at PHC and a member of the CST Executive Committee.

Rebecca Hahn, CTO and Project Director, emphasized that this session was a first step toward ensuring that we engage clinicians from all three health organizations in a meaningful way with this technology-enabled project.

What you can expect to see as an outcome of this session is a new project brand that reflects the morning's work and provides a clinical vision that resonates with both patients and providers.

The most important message coming from the session and the project as a whole is that we can't accomplish this exciting goal without you!
